Re: Firefighter _____
DOB: _____

Dear Dr. _____,

Recently the State of Vermont passed the Firefighter's Protection Act of 2007. This law recognizes the firefighters have significantly greater incidence of certain cancers than the general public. The law creates a presumption that will qualify a firefighter who is diagnosed with certain cancers for workman's compensation for their illness.

The cancers to which this presumption applies are leukemia, lymphoma, multiple myeloma, and cancers originating in the bladder, brain, colon, gastrointestinal tract, kidney, liver, pancreas, skin or testicles.

To qualify for this presumption, the firefighter must have a cancer screening by July 1, 2009. The cancer screening is based on American Cancer Society recommendations based on the firefighter's age and sex.

Firefighter _____ is a patient of yours and is eligible for the presumption provided by the Firefighters Protection Act of 2007.

He is a firefighter between the ages of 45 to 49 years old. According to the ACS guidelines, he should have a general medical checkup. Included in this checkup should be a thorough examination of the:

- Thyroid
- Oral cavity
- Skin
- Lymph nodes
- Testes
- Digital Rectal Exam and a PSA (if he is a man with a father, brother, or son with prostate cancer)

I am including a physical exam checklist to make this examination easier. You may use our official physical exam checklist, or, use one of your own. The firefighter should keep a dated copy of this physical for his records. A copy can be maintained in the firefighter's medical file if he chooses. Your report should include your findings, including findings that the fire fighter is free of cancer at the time of the screening.

Thank you for your assistance on this important issue. Please feel free to contact me if you have any questions.

Sincerely,

Richard Lovett, MD
Medical Advisor
Vermont State Firefighters Association
